- Introduction to Retrieval Augmented Generation

PROFILE

A motivated and detail-oriented Information Technology engineering student with hands-on experience in academic projects involving cloud computing, web development, and data-driven applications. Passionate about building scalable digital solutions and continuously learning modern technologies to solve real-world problems.

PROJECT EXPERIENCE

Shopping Cart Website   2024

- This project involved designing and developing a web-based shopping cart system that allows users to register, browse products, search items, and manage their shopping cart.
- The goal of this project was to understand real-world e-commerce workflows and improve skills in front-end development and system logic.

Healthcare Website   2025

- This project was developed to create a digital healthcare platform where users can book doctor appointments, view doctor profiles, and check availability.
- The project helped in understanding how technology can improve healthcare services while strengthening skills in web development and user experience design.
